Sync Password on Wireless - Furman Macs

You may have some problems syncing a new password with your Furman owned Mac over the wireless connection. If you do, please follow these instructions:

- Login to Mac using your **old** password
- Connect to wireless using your **new** password
- Connect to a server share and login with your **new** password
- Restart your Mac
- Login using your **new** password

That should sync your password. If you have any problems, please contact the IT Service Center.
