

# Compatible Network Devices

The Furman network supports a number of personal devices but not all are compatible with the type of network we use. Follow the instructions on [this walk-through](#) to determine whether your device is compatible, and what steps you can take to get it on the network.

Please check the list below for more information about your device. If your device is not listed, please contact the IT Service Center.

The Action, Documentation and Additional Information columns apply to students only. Faculty and staff can use the tables to determine if their device is compatible with the network. Remember, students may register up to 5 devices on the academic network.

## Computers

Device Type	Wired	Wireless	Action	Documentation	Additional Information
