

# Learning Innovation Center

To expedite opportunities for exploration of innovative technologies in the classroom, certain technologies are installed in JH101. In the rear of the room, near the ceiling are two cameras. One is dedicated to capturing the room, if the user chooses to do so. The other is dedicated to video conferencing.

If you are interested in capturing a lecture, you'll be happy to know that you can capture a Polycom video conference, the computer, document camera, white board, class seats and the audio from each. You can even capture one source, such as the computer, and a picture-in-picture video of one of the preset camera positions such as the whiteboard or professor. The entire capture gets saved to your USB 3.0 key and can be taken with you when you leave the room for later playback as an .mp4 file.

If you would like hands on instruction, contact Joe Hiltabidel (x3615).
